1. Executive summary

The 20th anniversary of the Paris Memorandum was marked by a number of events that will determine action for the years ahead. Two major inspection campaigns identified much room for improvement of issuing STCW certificates and implementation of the ISM Code. New amendments to the memorandum give more muscle to enforcement, including the introduction of ‘three strikes and out’ for substandard ships. The sinking of the oil tanker Prestige and the resulting oil disaster underline the need for more strict port State control actions.

All these events have a strong correlation and confirm concerns expressed in previous reports. A minority of rogue ship owners still manage to escape the net of control measures and continue to give the shipping industry a bad name.

Old ships registered under “fly-by-night” flags, surveyed by shady classification societies, manned by poorly certified seafarers and operated in defiance of all safety management principles pose an unacceptable risk to human life and the environment.

It is difficult to comprehend that banks, insurers and charterers alike still continue to do business with such operators.

With the introduction of more selective targeting, expanded inspections and new banning provisions, the Paris MOU is moving towards a “zero-tolerance” policy.

For the future ship owners that register ships under flags on the black list may find that it is more profitable to operate under quality flags or have their ships scrapped. Several flags on the black list have now taken positive measures to improve their record. A sign that the determined action of port State control can make a difference.

Despite warnings, some flags have managed to achieve new records in poor performance. Newcomers like Sao Tome and Principe and Tonga compete against each other for 3rd place on the black list.

Last year’s observation that classification societies should be more discriminating in which flags they represent, was substantiated in 2002, when 78% of the class related detentions took place on ships flying a flag on the black list.

Despite some initial criticism of this observation, a few more prominent societies are now reconsidering their association with these flags.

In 2002 classification societies were held responsible in 312 cases where class related detainable deficiencies were found, which is 20% of the total of 1,577 detentions. This is an improvement on the figure of 22% in 2001.

The total number of inspections increased substantially in 2002 and is 5.8% higher when compared with last year. The most positive trend can be observed in detentions which have decreased for the 2nd year in a row and now constitute 7.98% of total inspections.

The enhanced method of targeting is paying off and resources are allocated where needed. This is also supported by the fact that 67% of detentions took place on ships flying a black listed flag.

The number of deficiencies recorded during port State control inspections in 2002, 69,079, showed another slight increase of 1.0% when compared with last year.

Last year’s concern on ISM related deficiencies has been confirmed by the Concentrated Inspection Campaign carried out in 2002.

Despite the fact that several ship types have had management systems in operation for a number of years, and other ship types have recently received certificates, 3210 non-conformities were found, a rise of 260% compared with last year. It is questionable as to how some newly ISM compliant ships in particular have managed to get certified over the past year, since 75% (1185) of the total number of detentions take place on these ships.

Ships older than 15 years show 12 times as many non-conformities as ships less than 5 year old.
2. Paris MOU developments

General
Once a year the Port State Control Committee which is the executive body of the Paris MOU meets in one of the Member States. The Committee considers policy matters concerning regional enforcement of port State control, reviews the work of the Technical Evaluation Group and task forces and decides on administrative procedures.

The task forces, of which 8 were active in 2002, are each assigned a specific work programme to investigate improvement of operational, technical and administrative port State control procedures. Reports of the task forces are submitted to the Technical Evaluation Group (TEG) at which all Paris MOU members and observers are represented. The evaluation of the TEG is submitted to the Committee for final consideration and decision making.

The MOU Advisory Board advises the Port State Control Committee on matters of a political and strategic nature, and provides direction to the task forces and Secretariat between meetings of the Committee. The board meets several times a year and in 2002 was composed of participants from Denmark, Italy, Norway, Poland, the United Kingdom and the European Commission.

Port State Control Committee
The Port State Control Committee (PSCC) held its 35th meeting in Halifax, Canada on 6-9 May 2002.

The Committee revealed that a recent inspection campaign on crew certification has shown that around a third of ships did not comply with new requirements. During two months of checks on over 2400 ships, inspectors found that on 853 of them at least one of the crew did not have the correct STCW95 certification. In a major review of the Memorandum, the Committee agreed on new banning procedures which could result in ‘three strikes and out’ for many sub-standard ships, or ‘two strikes and out’ for the worst. Another addition is the International Labour Organization’s Protocol to ILO 147 which covers checking of new requirements for seafarers hours of work and rest. These new provisions will enter into force on 22 July 2003.

The trial of a detention review panel will continue. Under the scheme flag States and classification societies are able to ask for disputed detention cases to be reviewed by the MOU Secretariat and a group of member States. In 2001 and 2002 4 cases were reviewed and the decision of the port State revised in 3.

In the drive to improve transparency in the industry member States also agreed to extend their policy on publishing detentions to ensure that details are put on the MOU website and EQUASIS as soon as a ship is put under detention.

The meeting confirmed its intention to carry out a 3-month concentrated inspection campaign (CIC) on the International Safety Management Code (ISM) from 1 July 2002 when all ships will be required to have safety management systems in place.

A comprehensive package of expert and specialised training featuring the human element and safety and environment aspects was agreed with the first course starting in the fall of 2002.

Latvia was welcomed as the latest co-operating member of the MOU with the hope that they can achieve full membership over the next few years.
**Technical Evaluation Group**

The Technical Evaluation Group (TEG) convened twice during 2002. Several task forces submitted reports to the TEG for evaluation before submission to the Port State Control Committee.

Issues considered by TEG included:
- development of a new SIReNaC information system
- preparations for a Concentrated Inspection Campaign on ISM implementation in 2002
- preparations for a Concentrated Inspection Campaign on operational safety of passenger ships in 2003
- new guidelines for refusing ships access to MOU ports
- improvement of the reporting system for PSC inspections, including recording of charterers
- development of a Paris MOU reward system
- evaluation of statistics
- enforcement of the human element related to working and resting hours on board
- development of a new software system to check requirements for ships

**Port State Control Seminars**

**34th PSC Seminar**
The 34th Port State Control Seminar of the Paris MOU was held in Gdynia, Poland on 18-20 June 2002. The Seminar was attended by Port State Control Officers from the Paris MOU, as well as participants from Estonia, Latvia, Lithuania, Slovenia and the Viña del Mar Agreement, Tokyo MOU, DSI and Israel. The seminar covered the latest developments in the Paris MOU, fixed fire extinguishing installations and the revision of SOLAS Ch II-2. Furthermore the PSCOs were familiarised with the SIReNaC2000 database system.

**35th PSC Seminar**
The 35th PSC Seminar was held on 21-24 October 2002, in Helsinki, Finland. It was attended by Port State Control Officers from the Paris MOU, as well as participants from the Tokyo MOU, Estonia, Latvia, Lithuania, Slovenia and EC. Participants were informed about the latest developments regarding PSC from the EU. The seminar was dedicated to operational controls onboard passenger ships in preparation for the Concentrated Inspection Campaign which is scheduled to take place from 1st of May until 31st of July 2003.

**New Information System**

Fast developing database and internet technology have made it necessary to replace the current version of the SIReNaC F information system, which has been in operation since 1998.

The new system will also take account of amendments in port State control policy such as targeting of ships, new inspection procedures and measuring performance of classification societies. It will be designed by the French Département des Systèmes d’Information (DSI). The new system will make full use of internet technology and an ORACLE database architecture. In the future Port State Control Officers will be able to access the system for interrogation and updating by means of portable PC’s and cellular phones. It will also provide more accurate descriptions of inspection results and include a range of new data.

A Task Force was instructed to oversee the development of the new system which will become operational in January 2003.

**Paris MOU on the Internet**

The Paris MOU Internet site has continued to enjoy an increasing demand from a variety of visitors. In particular from flag and port States, government agencies, charterers, insurers and classification societies who are able to monitor their performance and the performance of others on a continuous basis.

In 2002 new information was added on the site. This includes:
- Appeal procedures of the MOU members, which the owner is entitled to in case of detention.
- Guidance for flag States and classification societies on obtaining review of a detention.
- A calculator to establish the target factor for a particular ship.
- Ships which have been banned from the region in 2002.

The regular publication of the “Rustbucket” has highlighted particularly serious detentions. These are described in detail and supported with photographs to make the general public aware of unsafe ships that have been caught by port State control. During 2002 the flow of new cases appeared to dry up. The only “ships of shame” were the m/v ISPARTA (detained by Italy) and m/v RAMAZ (detained by Spain). By offering an annual award for the best contribution to the “Rustbucket” it is expected that more serious cases will find their way to the web site.

Other information of interest such as the monthly list of detentions, the annual report, the statistics of the “Blue Book” and news items can be downloaded from the website, which can be found at “www.parismou.org”.

7

Annual Report 2002
3. Looking at 2003

Although the overall situation appears to be improving slightly in terms of detentions, port State control results for 2002 indicate that efforts need to be enhanced to obtain a substantial reduction in the number of substandard ships visiting the region.

Actions agreed by the Committee during its 35th session (2002) and 36th session (2003) are in the process of being implemented.

Concentrated Inspection Campaign
A number of recent incidents on passenger ships together with longer term statistics have underlined the need for strict compliance with operational standards on board ship. New guidelines have been adopted by the Committee and will provide a useful tool to establish whether the crew is able to respond effectively to emergency situations on large passenger ships. The CIC for Operational Safety on passenger ships will start in May 2003 for a period of 3 months.

Performance of classification societies
The Committee has monitored closely the performance of classification societies. The 2001 edition of the Blue Book included a table covering 3 years of performance for the first time. The targeting system (target factor) will take account of this table, as well as looking at whether the society is recognised by the European Union. The Committee will also be considering a proposal to issue tables showing the performance of classification societies when acting for flag States.

Ships of Quality
The Committee has made considerable progress with the development of a reward system for ships that have a good safety and port State control history. Criteria for award will take account of:
- the flag of the ship, which should appear on the White List;
- whether an IMO self assessment form has been submitted to the MOU;
- the performance record of its classification society;
- the PSC history of the ship.
The potential reward for operators of quality ships is a reduction in the inspection burden, which at the same time will enable port State control Authorities to direct their resources more effectively.

Review Panel
The Review Panel will become a permanent feature during 2003. Flag States or classification societies that cannot resolve a dispute concerning a detention with the port State may submit their case for review. The Review Panel is composed of representatives of 3 different MOU Authorities on a rotating basis plus the Secretariat. During the trial in 2001 and 2002 a total of 4 cases were
submitted to the panel. Three cases involving the flag State and one case from a classification society. Each case was administrated by the Secretariat and submitted to MOU members for review. Different members for each case.
In three cases the Review Panel considered the complaint justified and requested the port State to reconsider its judgement. As evidence of good co-operation all requests were honoured and the flag or classification society were informed accordingly.

**New amendments to the MOU**
The new amendments were adopted in 2002 in order to bring the Paris MOU in line with the latest changes of the EC Directive on Port State Control (Erika 1 Package) which will enter into force on 22 July 2003.
The Paris MOU is introducing tough rules to target high risk ships. Certain categories of ships from flags on the Black List will be banned after 2 or 3 detentions. Expanded inspection for older oil tankers, chemical and gas carriers, bulk carriers and passenger ships is mandatory after 12 months from the last expanded inspection.

In a move to target high risk ships, a ship with a Target Factor greater than 50 will be inspected after a month from the last inspection in the Paris MOU. Banning rules are extended. A ship registered with a flag on the Black List will be refused access to ports in the MOU region:
- after the 2nd detention in 3 years if it is in the “very high risk” or “high risk” category on the Black List
- after the 3rd detention in 2 years if it is in a lower risk category on the Black List

Detentions from 22 January 2002 count towards a ban. To lift it the flag State and, where appropriate, class must certify that the ship complies with required standards, and the ship must complete an expanded inspection at the owners expense. Port State inspectors will record the charterer of a ship carrying liquid or solid bulk cargoes. Ship owners need to make sure that the information is available on board.

A ship required under international rules to carry a functioning voyage data recorder may be detained if it is found not to be functioning properly.

More details can be found on the Paris MOU website, including a decision to begin inspecting ships with ILO working and rest hours regime, from July 2003.

**Training of Port State Control Officers**
In order to establish a higher degree of harmonisation and expertise the Authorities have invested substantial resources in regional training.
The Paris MOU has established a comprehensive training programme, which started in the fall of 2002. Several Expert and Specialized Training Courses will be given in 2003. Each course is completed with an examination and certification. This programme is in addition to the regular biannual seminars for Port State Control Officers.
Substantial support for these courses has been received from the maritime industry and organizations, such as ITF, OCIMF, NKK Class and Videotel.
The courses, content and tools will continue to be reviewed and developed to meet the needs of an effective Port State Control regime.
4. Looking ahead

The Port State Control Committee is already looking ahead in order to anticipate new developments and to take concerted harmonised actions. Such actions need to enhance the effectiveness of the region in combating substandard shipping.

The Paris MOU Advisory Board (MAB) has considered several policy issues of a political or strategic nature and will submit proposals to the Committee in 2004 for consideration.

Concentrated inspection campaign

New international requirements from ILO Convention No. 180 on hours of work and rest have entered into force on 8 August 2002. Through the Protocol of ILO Convention No.147, they are also subject to port State control. This protocol entered into force on 10 January 2003. The Committee has agreed to verify these and other requirements for working and living conditions on board during a CIC in the fall of 2004.

Recording of charterers

It has been recognized that charterers also play a role in the chain of responsibility in maritime transport. If the only ships chartered are ships with a good safety record there will be no market for sub-standard ships. The Paris MOU has carried out a trial during 2002 recording the charterer of ships engaged in the transport of liquid or solid bulk cargoes. In 2003 the data will be entered in the information system. As a next step the Committee may consider publishing the names of charterers of detained ships.

Reward system

A Task Force will be reporting on the results of the trial of a reward system for ships with a good safety and inspection history to the next meeting of the Committee in 2004.

5. Concentrated Inspection Campaigns

Several concentrated inspection campaigns have been held in the Paris MOU region over the past years. The campaigns focus on a particular area of compliance with international regulations with the aim of gathering information and enforcing the level of compliance. Each campaign is prepared by experts and focuses on a number of specific items for inspection. Experience shows that they serve to draw attention to the chosen area of compliance.

The concentrated Inspection Campaign in 2002 was dedicated to ISM compliance. The campaign, which was held in conjunction with the Tokyo MOU, ran from 1 July to 30 September 2002. Port State Control Officers used a uniform questionnaire to test key elements of the ship’s safety management system.

Results show that a total of 3846 eligible ships were inspected in the Paris MOU region during the campaign. A total of 163 ships were detained for major non-conformities in their system, resulting in an average detention percentage of 4.2%.

As may be expected, general cargo ships predominated among the number of ships that failed to comply with international safety management standards. Out of 1740 general cargo ships 128 (7.4%) were detained because of failings in their management systems alone. Bulk carriers showed a significant improvement when compared with the results of 1998. Their detention rate dropped from 8% in 1998 to 3.4% in 2002. Oil tankers and chemical tankers also improved their detention records in the 2002 campaign.

Remarkably, off-shore vessels showed the highest ISM non-compliance level with an ISM related detention rate of 7.7% and an overall detention rate of 30%. Passenger ships, special purpose ships and high speed craft were rated best with no ISM related detentions.

Six ships have been banned from the Paris MOU region for not having ISM certificates on board and a safety management system in place. These ships will not be
allowed to enter any Paris MOU ports until evidence has been provided that a certified safety management system is in place.

Of the areas of the management system inspected on board ship, the most frequent major non-conformities found were:

- Certificates and particulars not in order (14.3%)
- Senior officers not able to identify the “designated person” (13.8%)
- No maintenance routine and records available (13.8%)
- Master unable to provide documented proof of his responsibility and authority (11.7%)
- Senior officers not able to identify the company responsible for the operation of the ship (9.6%)
- Programmes for drills and exercises to prepare for emergency actions not available (9.1%)
- No certificates on board (8.2%)

Taking account of the scope of the campaign and the large number of inspections carried out, and comparing the results with the campaign carried out in 1998, the following conclusions can be drawn:

Although the documentary part of the management system on board seems to have improved over the past 4 years, the actual implementation by the responsible crew members on board leaves ample room for improvement. When senior officers are unable to identify the designated person of the company, the master is unable to provide documented proof of his responsibility and authority and senior officers are unable to identify the company responsible for the operation of the ship, it provides a clear indication that ship personnel are not applying the system to the operation of the ship.

The performance of flag States seen in 2002 is very different from that found in the 1998 campaign. This may be explained by the fact that most failures in non-compliance were found on general cargo ships which were not included in the previous campaign. It is not a surprise that the majority of the flags showing poor ISM compliance are also included in the 2002 Black List of the Paris MOU (Tonga, Belize, Lebanon, Syria, Ukraine, Morocco and Cambodia).

The performance of classification societies that issue ISM certificates on behalf of the flag State remains reason for concern. Although some changes in relative performance can be noted, the overall picture indicates that certification does not guarantee the actual implementation of a management system on board.

Looking at the results, it can be concluded that there is no room for complacency on the part of the Paris MOU. Continued efforts will be made by port State control to verify and ensure that the ISM Code does not become a paper exercise. As already mentioned in the executive summary of this report, ISM defects have increased by 260% over the past 2 years. The task is to ensure that safety management is driven by safety aspects and not by operational and commercial pressures of companies that operate in the shadows of the maritime industry.

The Paris MOU also focussed on the implementation of the new STCW provisions. The campaign started in 1 February 2002 and lasted 3 months, when it was discovered that nearly 80% of the inspected flag States had not fully implemented the amended STCW78/95 Convention.

The following elements were inspected during the campaign and showed non-compliance (expressed in percentage):
- safe manning document (SMD) on board (0.4% non-compliant)
- ship manned in accordance with the SMD (2.3%)
- watch duty schedule posted on board (13.2%)
- deck and engineer officers appropriately certificated (8.2%)
- certificates issues under STCW78/95 amendments (7.1%)
- correct number of personnel certified for GMDSS (radio) (1.5%)
- required documentation for personnel with designated duties in order (3.2%)
- dispensation, if issued to any required seafarers, valid (62.1%)

To take account of IMO Circular Letter STCW.7/Circ.12 (25 January 2002) ships which would normally be subject to detention because of defects in certification of officers received a “Letter of Warning” (LoW) until 31 July 2002.

A total of 3492 ships from 86 flag States were inspected during the inspection campaign. Of these a total of 173 (5%) were detained because of serious STCW deficiencies. A total of 1124 (32.2%) of the inspected ships received a LoW for other STCW deficiencies.

The result shows that the industry, the individual administrations and seafarers were not ready for the implementation of the 1995 amendments of the STCW78/95 Convention, which came in force on 1 February 2002.

Although it is difficult to pin-point who takes responsibility for such poor performance, since every party involved seems to accuse the others, the fact remains that 70 flag States did not have their business in order on 1 February 2002. A sorry performance given a period of 7 years for implementation.
6. Membership of the Paris MOU

In preparation for prospective new members of the Paris MOU, the Port State Control Committee has adopted criteria for co-operating status for non-member States and observer status for newly developed PSC regions.

Specific criteria, including a self-evaluation exercise, have to be met before co-operating status can be granted. Regional agreements seeking observer status must demonstrate that their member Authorities have an acceptable overall flag State record and have a similar approach in terms of commitment and goals to that of the Paris MOU.

In 2000 the Committee decided unanimously that Slovenia should be granted co-operating status. In April 2001 a Monitoring Team composed of representatives from Greece, the United Kingdom and the Secretariat visited Slovenia to determine whether the existing maritime safety system is adequate and in line with the information provided on the questionnaire. The results of the visit, including recommendations, have been considered and adopted by the Committee.

It is anticipated that after a visit of a Fact Finding Mission composed of Germany, Italy, the European Commission and the Secretariat, Slovenia will join the Memorandum as a full member in 2003.

In 2001 the Committee also decided unanimously to accept Estonia as a co-operating member. A Monitoring Team has visited Estonia in April 2002 and recommendations towards a full member status have been endorsed by the Committee. A Fact Finding Mission has been scheduled for the fall of 2003.

In 2002 the Committee considered a detailed self-evaluation prepared by the maritime Authorities of Latvia and decided unanimously that Latvia should be granted co-operating status. In April 2003 a Monitoring Team composed of representatives from Belgium, Denmark, the European Commission and the Secretariat will visit Latvia to determine whether the existing maritime safety system is adequate and in line with the information provided on the questionnaire.
7. Co-operation with other organisations

The strength of regional regimes of port State control which are bound by geographical circumstances and interests is widely recognised. Seven regional MOUs have been established. The Committee has expressed concern that some of these MOUs are dominated by Members who have not made efforts to exercise effective control over their own fleet. Many flag States belonging to regional MOUs appear on the Black List of the Paris MOU.

Two regional agreements have obtained official observer status with the Paris MOU: The Tokyo MOU and the Caribbean MOU. The United States Coast Guard is also an observer at Paris MOU meetings. This co-operation on an administrative level will help to ensure that port State control efforts remain compatible as far as is practicable. Other regions have not applied for observer status and would need to meet new Paris MOU criteria adopted in 2002 (see section 6) in order to co-operate on a technical and administrative basis.

The International Labour Organization and the International Maritime Organization have participated in the meetings of the Paris MOU on a regular basis. In 2002 the IMO organized a workshop for the Secretariats and database managers of regional agreements on port State control. Participants from all 7 regional agreements attended the workshop as well as representatives from their Members. The 2nd workshop, which carried on the progress made in 2000, agreed a set of “Recommendations”, to be submitted for consideration by the Committee of each regional agreement.

The 2001 Annual Report including inspection data has been submitted to the Sub-Committee on Flag State Implementation (FSI) by the United Kingdom. To allow comparison of PSC information, the submission was drafted in a format comparable to the USCG. Despite these efforts, the discussion did not touch on the substance of non-compliance of several flag States, nor the measures taken by them to improve their records. The Paris MOU would welcome such a dialogue in the interest of safety and the protection of the marine environment.
**8. Facts and figures**

**Introduction**

During 2002, 19,766 inspections were carried out in the Paris MOU region on 11,823 foreign ships registered in 106 different flag States. The number of inspections is substantially higher (5.8%) than the inspection figure for 2001 (18,681).

The number of individual ships inspected in 2002, 11,823, increased by 165 compared with the number inspected in 2001 (11,658). Over a 3 year period this number has only increased slightly, indicating that the Paris Memorandum has probably reached the ceiling of ships qualifying for an inspection.

The overall inspection rate in the region was 28.9% in 2002, compared with 27.3% in 2001, 28.6% in 2000 and 27.6% in 1999. France and, by a small margin, the Netherlands did not reach the 25% inspection commitment of the Memorandum. A chart showing the individual efforts of Paris MOU members is included in the statistical annexes to this Annual Report.

**Detentions**

Detention rates are expressed as a percentage of the number of inspections, rather than the number of individual ships inspected. The change was introduced in 1999 to take account of the fact that many ships are detained more than once during any one year.

The number of ships detained in 2002 for deficiencies clearly hazardous to safety, health or the environment amounted to 1,577. It compares with the number of 1,699 detained in 2001, 1,764 in 2000, and 1,684 in 1999. The significant decrease of 122 (7.2%) ships compared with 2001, has reduced the average detention percentage to 7.98% in 2002, compared with 9.09% in 2001, 9.50% in 2000 and 9.15% in 1999. This is the first time since 1993 that the detention percentage has fallen below 8%.

**“Black, Grey and White List”**

In the 1999 Annual Report the traditional “black list” of flags was replaced by a “Black, Grey and White List”. The tables are still based on performance over a 3-year rolling period but now show the full spectrum between quality flags and flags with a poor performance which are considered a high or very high risk.

A “hard core” of flag States reappear on the “Black List”. Tonga, last year’s “newcomer” to the category of very high risk even managed to climb the ladder to 4th place. The fact that owners still manage to find new and exotic flags to register their ships is demonstrated by Dem. Rep. of Korea, which has entered the Black List as a high risk flag. Tunisia has moved from the “Grey List” to the “Black List”.

On a more positive note: Azerbaijan and Russia have moved down from the “Black List” to the “Grey List” and will hopefully continue this trend.

The “White List” represents quality flags with a consistently low detention record. The Paris MOU flags of the United Kingdom, Sweden, Finland, Germany and Ireland are placed highest in terms of performance. The Isle of Man has shown remarkable performance and is now the 4th best register. Barbados, Poland and Austria have moved down to the “Grey List”. New to the “White List” are Italy, Netherlands Antilles and the United States of America.

Flag States with an average performance are shown on the “Grey List”. Their appearance on this list may act as an incentive to improve and move to the “White List”. At the same time flags at the lower end of the “Grey List” should be careful not to neglect control over their ships and risk ending up on the “Black List” next year.

There are signs that several flags appearing on the “White List” now use their ranking to advertise themselves as quality registers and are making efforts to reach a higher ranking the following year.

**Ship Types**

Looking at detentions by ship type over several years, it is noted that general dry cargo ships and bulk carriers still account for over 80% of all detentions.

Last year’s rise in detention percentage of passenger ships was confirmed in 2002. During 2002 a total of 628 inspections took place on passenger ships, of which 57% showed deficiencies, 7.2% resulted in detention (45 detentions).
The performance of oil tankers has steadily improved over the last 3 years. Detention percentages have dropped from 8.1% in 2000 to 4.0% in 2002. A positive development in times when front pages are dominated by oil spills.

Statistical annexes to this report show the detention percentage for each ship type in 2002, 2001 and 2000.

**Banning of Ships**
A total of 24 ships were banned from the Paris MOU region in 2002, because they failed to call at an agreed repair yard (14), jumped detention (2) or were not certified in accordance with the ISM Code (8). By the end of 2002 the ban had been lifted on 11 of these ships after verification that all deficiencies had been rectified. A number of ships remain banned from previous years.
An up-to-date list of banned ships can be found on the internet site of the Paris MOU on Port State Control.

**Performance of Classification Societies**
Details of the responsibility of classification societies for detainable deficiencies have been published since 1999. When one or more detainable deficiencies are attributed to a classification society in accordance with the criteria it is recorded and class is informed. Out of 1,577 detentions recorded in 2002, 20% (312) were considered class related, a slight improvement when compared with 2001 (22%).

When considering the rate of class related detentions as a percentage of inspections in 2002, Register of Shipping (Albania) 34.5%, Isthmus Bureau of Shipping (Panama) 27.8%, Inclamar (Cyprus) 15.2%, International Register of Shipping (U.S.A.) 14.3%, International Naval Surveys Bureau (Greece) 12.1% scored highest as indicated in Model 2 in the Statistical Annex.

**Deficiencies**
A total of 69,079 deficiencies were recorded during port State control inspections in 2002, only a slight increase (0.5%) on the number of 68,756 recorded in 2001 (67,735 in 2000).
With some exceptions, ships older than 15 years show substantially more deficiencies than ships of less than 5 years.
The trends in key safety areas are shown below. More detailed information may be found in the statistical publication of the Paris MOU, the 2002 Blue Book.

**Safety**
In 2001, deficiencies in vital safety areas such as life saving appliances, fire fighting equipment, safety in general and navigation accounted for 48% of the total number of deficiencies.
Deficiencies in these areas decreased by 10% from 37,029 in 2000 to 33,242 in 2002. This is a positive trend when compared with the last few years.
Older ships (15 years) show 26,818 deficiencies, compared to younger ships (5 years) with 1,414 deficiencies, a rate 19 times higher.

**Marine environment**
MARPOL73/78 Annex I, II, III and V deficiencies have decreased by 9%, from 5,719 in 2000 to 5,207 in 2002. Again a positive trend when compared with previous years.
In 2002 older ships (15 years) show 3,904 deficiencies, compared to younger ships (5 years) with 390 deficiencies, a deficiency rate 10 times higher.

**Working and living conditions**
Major categories related to working and living conditions are “crew and accommodation”, “food and catering”, “working places” and “accident prevention”. Deficiencies in these areas decreased by 12%, from 5,178 in 2000 to 4,548 in 2002.
In 2002 older ships (15 years) show 3,946 deficiencies, compared to younger ships (5 years) with 89 deficiencies, a deficiency rate 44 times higher.
Certification of crew
Compliance with the standards for training, certification and watch keeping for seafarers indicated an increase of 368%, from 1,179 in 2000 to 5,522 in 2002. This is mainly due to the inspection campaign on the implementation of STCW95 requirements.
Older ships (15 years) show 4,096 deficiencies in 2002, compared to younger ships (5 years) with 450 deficiencies, a deficiency rate 9 times higher.

Operational
Although MARPOL operational deficiencies have dropped substantially, SOLAS related operational deficiencies have steadily increased from 1132 in 2000 to 1353 deficiencies in 2002 (20%). A trend that is observed over the past years with concern.
In 2002 older ships (15 years) show 1,000 deficiencies, compared to younger ships (5 years) with 102 deficiencies, a rate 10 times higher.

Management
The International Safety Management Code came into force for certain categories of ships from July 1998, and was extended to other ships in July 2002. In the year under review 3,210 (major) non-conformities were recorded, an increase of nearly 250% when compared with the 2000 results. The figures reflect the results of the Concentrated Inspection Campaign in 2002. They are alarming since they provide a clear indication that management systems are not working for certain ships.
Older ships (15 years) show 2505 (major) non-conformities, compared to younger ships (5 years) with 211 (major) non-conformities, a rate 12 times higher.
Most prominent are older general dry cargo ships and bulk carriers with 1866 non-conformities, 75% of the total (2505).
Older general dry cargo ships (15 years) show 1319 (major) non-conformities, which score a non-conformity rate 15 times higher than younger ships (5 years) with 89 (major) non-conformities.
Older bulk carriers (15 years) show 547 (major) non-conformities, which score a non-conformity rate 22 times higher than younger ships (5 years) with 25 (major) non-conformities.
Other ship types of over 15 years show lower rates, although ISM compliance of older tankers and passenger ships should be closely monitored.

*) The information contained in the statistical material of Models 1-4 concerning classification societies were collected during the calendar year 2002 on the basis of provisional criteria for the assessment of class responsibility. Due to updating anomalies the figures may include a small margin of error. This margin is not greater than 1.5 percent to either side.

4 Where a country is shown after a classification society this indicates its location and not necessarily any connection with the maritime administration of that country.
Model 2 - Detentions of ships with class related detainable deficiencies per Classification Society

**Model 4 - Detentions of ships with class related detainable deficiencies per flag state above average**

(cases in which more than 10 individual ships are inspected)
The new normative listing of flag States provides an independent categorization that has been prepared on the basis of Paris MOU port State inspection results. Compared to the calculation method of previous year, this system has the advantage of providing an excess percentage that is significant and also reviewing the number of inspections and detentions over a 3-year period at the same time, based on binomial calculus.

The performance of each flag State is calculated using a standard formula for statistical calculations in which certain values have been fixed in accordance with agreed Paris MOU policy. Two limits have been included in the new system, the ‘black to grey’ and the ‘grey to white’ limit, each with its own specific formula:

\[ u_{\text{black-to-grey}} = N \cdot p + 0.5 + z\sqrt{(N \cdot p \cdot (1-p))} \]
\[ u_{\text{white-to-grey}} = N \cdot p - 0.5 - z\sqrt{(N \cdot p \cdot (1-p))} \]

In the formula “N” is the number of inspections, “p” is the allowable detention limit (yardstick), set to 7% by the Paris MOU Port State Control Committee, and “z” is the significance requested (z=1.645 for a statistically acceptable certainty level of 95%). The result “u” is the allowed number of detentions for either the black or white list. The “u” results can be found in the table A number of detentions above this ‘black to grey’ limit means significantly worse than average, where a number of detentions below the ‘grey to white’ limit means significantly better than average. When the amount of detentions for a particular flag State is positioned between the two, the flag State will find itself on the grey list. The formula is applicable for sample sizes of 30 or more inspections over a 3-year period.

To sort results on the black or white list, simply alter the target and repeat the calculation. Flags which are still significantly above this second target, are worse than the flags which are not. This process can be repeated, to create as many refinements as desired. (Of course the maximum detention rate remains 100%!) To make the flags’ performance comparable, the excess factor (EF) is introduced. Each incremental or decremental step corresponds with one whole EF-point of difference. Thus the excess factor EF is an indication for the number of times the yardstick has to be altered and recalculated.

Once the excess factor is determined for all flags, the flags can be ordered by EF. The excess factor can be found in the last column the black, grey or white list. The target (yardstick) has been set on 7% and the size of the increment and decrement on 3\%. The Black/Grey/White lists have been calculated in accordance with the above principles.

The graphical representation of the system, below, is showing the direct relations between the number of inspected ships and the number of detentions. Both axis have a logarithmic character. as the ‘black to grey’ or the ‘grey to white’ limit.
Example flag on Black list:
Ships of Romania were subject to 170 inspections of which 37 resulted in a detention. The “black to grey limit” is 18 detentions. The excess factor is 4,25

\[ N = \text{total inspections} \]
\[ P = 7\% \]
\[ Q = 3\% \]
\[ Z = 1.645 \]

How to determine the black to grey limit:

\[ u_{black\to grey} = N \cdot p + 0.5 + z\sqrt{N \cdot p \cdot (1-p)} \]
\[ u_{black\to grey} = 170 \cdot 0.07 + 0.5 + 1.645\sqrt{170 \cdot 0.07 \cdot 0.93} \]
\[ u_{black\to grey} = 18 \]

The excess factor is 4,25. This means that ‘p’ has to be adjusted in the formula. The black to grey limit has an excess factor of 1, so to determine the new value for ‘p’, ‘q’ has to be multiplied with 3,25, and the outcome has to be added to the normal value for ‘p’:

\[ p + 3.25q = 0.07 + (3.25 \cdot 0.03) = 0.1675 \]
\[ u_{excess\\text{factor}} = 170 \cdot 0.1675 + 0.5 + 1.645\sqrt{170 \cdot 0.1675 \cdot 0.8325} \]
\[ u_{excess\\text{factor}} = 37 \]

Example flag on Grey list:
Ships of Thailand were subject to 106 inspections of which 7 resulted in a detention. The “black to grey limit” is 12 and the “grey to white limit” is 3. The excess factor is 0,46.

How to determine the black to grey limit:

\[ u_{black\to grey} = N \cdot p + 0.5 + z\sqrt{N \cdot p \cdot (1-p)} \]
\[ u_{black\to grey} = 106 \cdot 0.07 + 0.5 + 1.645\sqrt{106 \cdot 0.07 \cdot 0.93} \]
\[ u_{black\to grey} = 12 \]

How to determine the grey to white limit:

\[ u_{grey\to white} = N \cdot p - 0.5 - z\sqrt{N \cdot p \cdot (1-p)} \]
\[ u_{grey\to white} = 106 \cdot 0.07 - 0.5 - 1.645\sqrt{106 \cdot 0.07 \cdot 0.93} \]
\[ u_{grey\to white} = 3 \]

To determine the excess factor the following formula is used:

\[ ef = \text{Detentions - grey to white limit/grey to black limit} \]
\[ ef = (7 - 3) \]
\[ ef = 0.46 \]

Example flag on White list:
Ships of Liberia were subject to 2652 inspections of which 104 resulted in detention. The “grey to white limit” is 164 detentions. The excess factor is -0,80.

How to determine the grey to white limit:

\[ u_{grey\to white} = N \cdot p - 0.5 - z\sqrt{N \cdot p \cdot (1-p)} \]
\[ u_{grey\to white} = 2652 \cdot 0.07 - 0.5 - 1.645\sqrt{2652 \cdot 0.07 \cdot 0.93} \]
\[ u_{grey\to white} = 164 \]

The excess factor is - 0,80 This means that ‘p’ has to be adjusted in the formula. The grey to white limit has an excess factor of 0, so to determine the new value for ‘p’, ‘q’ has to be multiplied with -0,80, and the outcome has to be added to the normal value for ‘p’:

\[ p + (-0.80q) = 0.07 + (-0.80 \cdot 0.03) = 0.046 \]
\[ u_{excess\\text{factor}} = 2652 \cdot 0.046 - 0.5 - 1.645\sqrt{2652 \cdot 0.046 \cdot 0.954} \]
\[ u_{excess\\text{factor}} = 104 \]
